

Submitted by the Alaska Department of Fish and Game at the request of Board Member Payton
 March 1, 2017

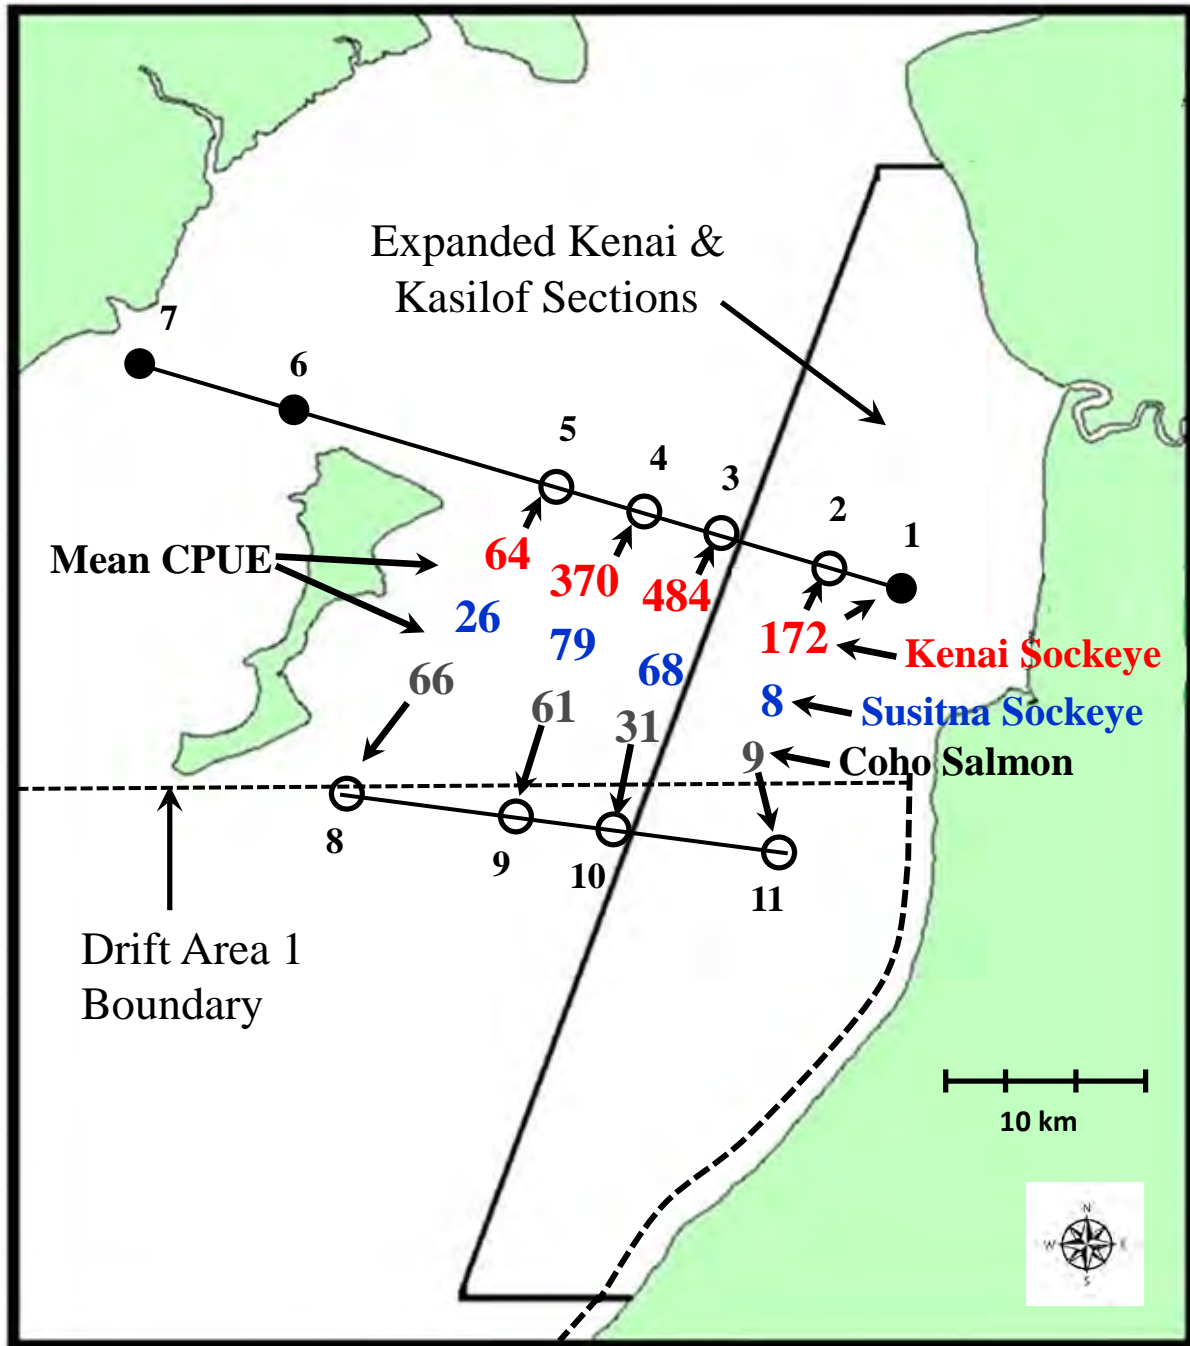

Figure 1.—Locations of stations fished by the northern offshore test fishery vessel and mean total Kenai and Susitna river sockeye salmon catch per unit effort (CPUE), and mean total coho salmon CPUE pooled across all years (2012–2014) by station along the northern OTF transect.

Note: Stations 1–7 were fished in 2012–2013 and stations 2–5 and 8–11 were fished in 2014 (open circles). The expanded Kenai and Kasilof section is represented by the solid line and drift gillnet area 1 by the dashed line. Data from comparable stations (i.e. stations 5&8, 4&9, 3&10, and 2&11) sampled along the upper and lower Kalgin Island transects in 2014 were pooled in this analysis.
