

The new escapement goals as determined by ADF&G for the Susitna, Yentna and Talkcetna rivers (shaded area) are approximately the same range as the Deshka River goal of 13,000 to 28,000 that was in effect prior to this meeting. Using that old Deshka River Chinook escapement goal the escapement in 14 of 36 did not replace itself and had to be reduced. That reduced yield from over-escapement led to fisheries closures and restrictions, not meaningful opportunity. Do you really want to repeat this failed management strategy?
